## SECURE PORTAL ACCESS

Planet Controls can also provide secure remote proxy access to the CREMS8000 panel through our secure servers hosted in an enterprise data centre, the service is facilitated by the in-built GPRS connection on the CREMS8000 panel. This is the perfect solution should the CREMS panel be required to be segregated from the local network or should key service providers be required to gain access to the CREMS panel. This negates the need for VPN connections outside of the internal network.

With personalised logon for each user, access can be restricted and customised. Should there be a power outage, the backup batteries will maintain the wireless modem connection and the system will remain online and accessible. Emails will be sent via the Telstra wireless server and the system time will be synchronised with the Planet Controls NTP server.
